

Your INL Update — Week of Oct. 18, 2010

This is Nicole Stricker with your INL Update.

Imagine stepping into a virtual world where data is displayed all around you. You can get a glimpse inside the new CAVE at Idaho National Laboratory's Center for Advanced Energy Studies. The computer-assisted virtual environment brings data to life and lets researchers examine 3-D models from any angle. You can see the CAVE for yourself when you watch the video on INL's home page.

Do electric vehicles spark your imagination? You can learn more about the development of long-lived batteries for such vehicles at the monthly "Brew with the Crew" event on Thursday. A research engineer from INL's Energy Storage and Transportation Systems Department will be the featured speaker. The social begins at 4:30 p.m. at the Hard Hat Café in Snake River Landing.

Did you know the INL site is a treasure trove of archaeological and cultural resources? You can get a glimpse of history through a new narrated slide show on INL's home page. The slideshow captures the sights and sounds of one summer tour.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
