

Your INL Update — Week of Oct. 25, 2010

This is Misty Benjamin with your INL Update.

Some local families spent Saturday participating in science demos at the Idaho Science and Engineering Festival on the Idaho State University campus. Idaho National Laboratory helped sponsor the family-friendly event, which is one of several around the country preceding the National Science Festival this week in Washington, D.C.

INL is reaching across state borders to support energy research. The lab helped dedicate the Bingham Research Center in the Vernal, Utah, Uintah Basin. The state-of-the-art facility houses classrooms, offices, laboratories and a large lab that will help INL demonstrate new oil shale development technology. You can read more in a new feature story on INL's website.

INL and Northwest Nazarene University, located in Idaho's Treasure Valley, will hold a science, technology, engineering and math education workshop for teachers on Oct. 30. The free teacher workshop will include content review, hands-on activities and classroom resources.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
